SKILLS

C#

ASP.NET Core

.NET 8 Blazor

Web API

HTML

CSS

Bootstrap

GitHub/Git

CI/CD

SQL

PostgreSQL

PROFESSIONAL EXPERIENCE

Coder Foundry, Full-Stack .NET Developer/Student

March 2024 – June 2024 | United States

Overview

An intensive 12-week program at a highly selective bootcamp, dedicated to full-stack development with ASP.NET [↗](#) and Blazor. The program covered everything from front-end basics to advanced back-end architecture, emphasizing real-world application development.

Skills Gained

- Responsive UIs using CSS, HTML, and Bootstrap
- Developed and integrated RESTful APIs using WebAssembly and JavaScript
- Database management with Entity Framework
- Implemented role-based access control (RBAC) with ASP.NET Identity, securing multi-user applications through authentication and authorization
- Managed CI/CD workflows for streamlined deployment

PROJECTS

LazyBug [↗](#)

Bug Tracker

I created a bug tracker in three weeks that allows users to create tickets, with admins and project managers assigning them to developers. Tickets are organized by priority and completion status. I also implemented user roles for enhanced security, streamlining task management and improving workflow efficiency.

Tech Log [↗](#)

Blog

A blog web application that allows users to read articles I have written about web development. The platform offers an intuitive, user-friendly interface for browsing and accessing blog posts, with features like categorization, search functionality, and responsive design to enhance the user experience.
